

## 533 FIBERGLASS LIGHT PUTTY

TIME  
SAVING

- High elasticity
- Time efficient: fast to apply, short drying time
- Can be sanded after only 25 min
- Good stability on vertical surfaces
- Excellent adhesive properties
- Easy to sand, even after longer period of time
- Very smooth application
- Excellent filling properties

- Weighs almost half the weight of ordinary putty, helping to avoid extra weight on the repaired part
- Does not create pores due to its unique fillers
- It is easy to sand, has high elasticity and excellent adhesion to a wide range of materials
- No additional fine putty required, can be overcoated directly with filler primer
